

Dollar value savings of RTLS platform

My Calculation(s)

- Enhancing Sales yard management
- Tracking 545645121 personnel across the facility
- Tracking 6.500454564351321e+73 assets across the facility

Dollar value savings and returns using location tracking per 3 year

\$9.10063639009185e+75

to

\$1.2025840944049943e+76

- ✓ **Sales yard management tracking improves by 18 - 22%**
- ✓ Tracking workforce availability improves by 18 - 22%
- ✓ Equipment and machine utilization efficiency increases by 18 - 22%
- ✓ Dock utilization improves by 18 - 22%
- ✓ Process automation improves by 18 - 22%

How InSite works for the Warehouse sector?

Visibility:

Manufacturers all over the world struggle with a disjointed supply chain, yet as more and more technology is developed, there are greater expectations than ever for speed and efficiency. Improved processes and quick outcomes in warehouse operations are achievable with a robust RTLS system.

Traceability:

Real-time location system (RTLS) is the technology of choice for warehouses to maximize their overall value since it automatically tracks and monitors objects and interactions as they take place.

Digitization:

Warehouses need to scale up and fulfil the standards of an intelligent, efficient, and automated warehouse due to the introduction of always-on e-commerce, the need for quicker responses, and the requirement to manage a greater number of SKUs with fewer errors.
